

MISSION 7

Kissimmee, Port Orange, Volusia County
Long Beach, MS EMAC #818
Florida Tacking # 3033
October 20th- October 26th, 2005

DAILY REPORT 1

Sunday October 23rd , 2005

GOALS:

- Provide data entry for the utilities damage assessment
- Clean and refine master database
- Provide desk help for the Long Beach Building Department
- Continue entering and mapping GIS
- Go through all FEMA documents to verify all parcels and data are entered and mapped

Summary

- This is a down day, but the team cleaned out and organized the large tent behind the fire station. The tent is clean and organized and ready for any others who may have to stay there. All trash was thrown away and supplies were grouped in easy to gather sections. The tent floor was also swept and cleaned of debris.
- The team cleaned the grounds around the fire station and picked up trash and cigarette butts. Our temporary yard could be on the cover of good lawns magazine now.
- IT chose to work on some database file sharing and Right Of Entry searches and investigations on those that had a zero address, no street name, or parcel number that was not already listed in GIS.
- GIS went through the FEMA documents previously collected and verified the information was in the database and properly placed within the GIS system.
- Volunteers from Tennessee arrived to work at the distribution warehouse. They were given a tour of the facility and set up on living arrangements. They will meet with the Mayor's secretary in the morning for assignments.
- The database and format was copied to be supplied to Pass Christian.
- Mission 7, day 4 ended.
