IMPORTANT

FLOOD

Information

This brochure provides flood protective information for residents and owners. Standard Homeowners' policies do not cover flooding from rising water. All property owners and renters should purchase flood insurance. A slow moving Florida tropical storm can cause flooding in areas that have no historical flooding issues.

Know your Flood Zone and Flood Risk and Buy Insurance

Flooding can happen anywhere. To find out what flood zone your property is located in or to learn about historical flooding, localized drainage issues, repetitive loss areas, topographic issues, please contact your local government office or visit: <http://www.volusia.org/services/public-protection/emergency-management/types-of-disasters/floods/>

Standard Homeowners' policies do not cover flooding from rising water. All property owners can purchase flood insurance for structures and contents within Volusia County. Renters can purchase insurance for their belongings too. Do not procrastinate. Flood insurance policies have a 30 day waiting period before they become effective.

When buying and selling a home, some flood insurance policies are transferable saving you \$ in a home purchase and sales transactions. To find out more about flood insurance, speak to an **insurance professional** to understand your flood insurance needs and to see if you are fully insured. This is especially important if you are in a condominium association, a master policy does NOT usually cover the inside of the unit or contents. More information is available on www.floodsmart.gov website.

The communities on the back of this brochure participate in the National Flood Insurance Program Community Rating System (CRS) program, saving you \$ on insurance.

Build Responsibly

If you are planning substantial improvements to your home – that is, repairs are equal to or greater than 50% of your home's market value - then you must meet current Florida Building Code standards and comply with your local floodplain ordinance.

Make sure you get a permit before you build, and work with a licensed contractor. An Elevation Certificate may be on file at your local government office .

Protect Natural Areas

Wetlands, open space, and the Coastal Barrier Resources System Areas are important for many reasons, one of which is storage of stormwater. It is everyone's responsibility to protect these areas. Here's what you can do to keep them clean and healthy .

- ◆ Don't dump grass or other items in storm drains;
- ◆ Keep creeks, streams, and ditches clean and free of debris;
- ◆ Scoop the poop, keep pet waste from entering waterways;
- ◆ Use a car wash;
- ◆ Use pesticides and fertilizers sparingly;
- ◆ Adhere to Volusia County fertilizer ordinance; and
- ◆ Do not apply fertilizers closer than 15' to a water body.

Protect Your Property

Flooding causes more property damage in the United States than any other type of natural disaster. While recent construction regulations have reduced the risk of flooding, many older structures remain susceptible. There is a growing interest by property owners to develop practical and cost-effective methods for reducing the likelihood of flooding

Several effective techniques include: redirect downspouts away from your home; grade your yard so water drains to a catchment area; use a rain barrel and use the water for your landscaping, and saving on the cost of potable water.

For flood protection advice including a potential site visit from staff, and possible financial assistance, contact your local government agency on the back of this brochure.

Flood Safety Measures

You can protect yourself from flood hazards by taking measures to ensure the safety of life and property before, during, and after a flood. You will be notified of a flood event:

- ◆ By monitoring your NOAA weather radio. Listen for instructions from Volusia County Emergency Management; consult their social media (Twitter/Facebook).
- ◆ Door-to-door (Law enforcement).
- ◆ Reverse 911 area-wide telephone notification system (sign up at www.volusia.org/emergency).
- ◆ Public media.

Also:

- ◆ When walking, do not attempt to cross flowing streams.
- ◆ Know your evacuation routes before flooding occurs.
- ◆ Find a place where your family can safely meet up after an evacuation order is issued.
- ◆ Do not drive through flooded areas. More people drown in their cars than anywhere else.
- ◆ Don't drive around road barriers.
